

Rounak Saraf

Senior Software Engineer · AI Products & Full-Stack

San Sebastián, Spain · Open to relocation

+34 647 386 943 · rounaksaraf.official@gmail.com · github.com/rounaksaraf · linkedin.com/in/rounak-saraf

Spanish residence and work permit (highly qualified professional)

Full-stack engineer shipping AI-powered products end to end: LLM-backed services behind FastAPI, product surfaces in Next.js and React, and the auth, CI/CD and deployment underneath. Built an agent system generating production-ready full-stack apps used by **200+** engineers across **15+** teams, cutting scaffolding **70%+** across **100+** services.

SKILLS

AI & LLM Products: LLM-backed features, agent orchestration, RAG, embeddings & vector search, context design, agent observability, LLM compression (CompactifAI)

Frontend: Next.js, React, TypeScript, Streamlit, HTML/CSS

Backend: Python, Go, FastAPI, Django, Node.js, REST, GraphQL, SQL

Infrastructure & Delivery: AWS (EKS, Lambda, SQS), Kubernetes, Helm, ArgoCD, Docker, Terraform, GitLab CI/CD, Kafka, Prometheus, Grafana, enterprise SSO (Logto, Microsoft Entra ID, AWS Cognito / OIDC)

Data: PostgreSQL, MongoDB, DynamoDB, ClickHouse, Cassandra, Druid

EXPERIENCE

Senior Software Engineer (SDE 3), Multiverse Computing

Nov 2025 – Present

San Sebastián, Spain

- Built **Template Agents** 0→1, a deterministic codegen pipeline: rule-based transforms, LLM calls scoped to unstructured steps, append-only event log, serialization gate resolving a concurrent-run race. Cut service scaffolding **70%+** across **100+** services.
- Built the per-run agent observability layer: step, tool call, token spend, reasoning trace. **6** releases, **500+** automated tests.
- Tech lead, **Foundry**: versioned SDK for a **€20M** client exposing Multiverse's compression, pruning and healing algorithms as a RAG platform. Owned version propagation and rolling template upgrades downstream without breaking compatibility. Ramped **10+** engineers to independent ownership; established the team's design-review process.
- Extending Template Agents into a central delivery platform: completed client work, Foundry included, generalised into reusable components so new projects are generated from the platform rather than built alongside it.

Software Engineer (SDE 2), Multiverse Computing

Dec 2023 – Nov 2025

San Sebastián, Spain

- Owned the universal platform standardising FastAPI/Next.js/Streamlit delivery across the entire engineering organisation: product, services, DevOps and MLOps, **200+** engineers across **15+** teams at peak. Built its Next.js template frontend, the entry point and conventions every company app inherits; migrated auth to enterprise SSO (Logto, OIDC) fleet-wide.
- Operated **100+** production services on EKS via Helm and ArgoCD at **99.99%** availability: load balancing, pod replicas, DB failover.
- Chose staged **Dev-Test-Prod** over trunk-based development for the platform: release discipline across the organisation did not support safe continuous integration to main. Built the first staged pipeline; now the standard branching strategy on ongoing projects.
- On-call across time zones for a **70+** engineer, **15-app** build day: hot-patched deployment and auth edge cases in flight; shipped the missing logging layer and deployment docs.
- Cut GitLab CI runtime **65%** across all jobs via caching, modularisation and parallelisation.

Software Engineer, Inovatyv Pvt. Ltd.

Jun 2023 – May 2024

Remote, India

- Architected a secure HR system for **10,000+** employees and the APIs behind a core-banking platform. Built its financial data pipelines (PySpark/Airflow, NiFi, PostgreSQL, Druid on K8s) serving **100,000+** bank clients; cut compute **60%**.

Software Engineer, CodeNation, Trilogy Innovation

Jul 2022 – Mar 2023

Dubai, UAE / Remote

- Shipped a GPT-3 QA and automated L1 support system (React, TypeScript, GraphQL, AWS CDK); cut ticket resolution **15h** to **7min**.
- Designed the Lambda + SQS async pipeline behind it, processing **80,000+** support tickets in under **2h**.

EDUCATION & ACHIEVEMENTS

Writing: [How I Built Template Agents: Deterministic AI Pipelines](#) (LinkedIn, 2026)

B.Tech, Electrical and Computer Engineering. Indraprastha Institute of Information Technology (IIIT), Delhi · 2022

Startup Technical Advisor, Creative Destruction Lab (CDL) San Sebastián: advise early-stage teams on engineering strategy, from architecture to production pipelines.
